

Modulating damper actuator for adjusting dampers in technical building installations

- Air damper size up to approx. 1 m<sup>2</sup>
- Torque motor 5 Nm
- Nominal voltage DC 48...110 V
- Control modulating 2...10 V
- Position feedback 2...10 V

| Technical data  |  |   |
|-----------------|--|---|
| Electrical data | Nominal voltago                        | DC 48110 V  |
| Electrical data | Nominal voltage  Nominal voltage range |   |
|                 | Power consumption in operation         | DC 33.6140 V (EN); DC 33.6121 V (UL) 2.5 W  |
|                 |  | 2.5 W   |
|                 | Power consumption in rest position     | 2.5 VA  |
|                 | Power consumption for wire sizing      |   |
|                 | Connection supply Connection control   | Cable 1 m, 2 x 0.75 mm <sup>2</sup>   |
|                 |  | Cable 1 m, 4 x 0.75 mm <sup>2</sup>   |
|                 | Parallel operation                     | Yes (note the performance data)   |
| Functional data |  | 5 Nm  |
|                 | Operating range Y                      | 210 V   |
|                 | Input Impedance                        | 100 kΩ  |
|                 | Position feedback U                    | 210 V   |
|                 | Position feedback U note               | Max. 1 mA   |
|                 | Position accuracy                      | ±5%   |
|                 | Direction of motion motor              | selectable with switch 0/1  |
|                 | Direction of motion note               | Y = 0 V: At switch position 0 (ccw rotation) / 1 (cw rotation)  |
|                 | Manual override                        | with push-button, can be locked   |
|                 | Angle of rotation                      | Max. 95°  |
|                 | Angle of rotation note                 | can be limited on both sides with adjustable mechanical end stops                                     |
|                 | Running time motor                     | 150 s / 90°   |
|                 | Sound power level, motor               | 35 dB(A)  |
|                 | Mechanical interface                   | Universal shaft clamp 620 mm  |
|                 | Position indication                    | Mechanically, pluggable   |

### Safety notes

- The device must not be used outside the specified field of application, especially not in aircraft or in any other airborne means of transport.
- Outdoor application: only possible in case that no (sea) water, snow, ice, insolation
  or aggressive gases interfere directly with the actuator and that is ensured that the
  ambient conditions remain at any time within the thresholds according to the data
  sheet
- Caution: Low voltage!
- Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- Cables must not be removed from the device.
- To calculate the torque required, the specifications supplied by the damper manufacturers concerning the cross-section, the design, the installation site and the ventilation conditions must be observed.
- The device contains electrical and electronic components and must not be disposed
  of as household refuse. All locally valid regulations and requirements must be
  observed.

### **Product features**

Mode of operation

The actuator is connected with a standard modulating signal of 0...10 V and drives to the position defined by the positioning signal. Measuring voltage U serves for the electrical display of the damper position 0.5...100% and as slave control signal for other actuators.

Simple direct mounting

Simple direct mounting on the damper shaft with a universal shaft clamp, supplied with an anti-rotation device to prevent the actuator from rotating.

Manual override

Manual override with push-button possible (the gear is disengaged for as long as the button is pressed or remains locked).

Adjustable angle of rotation

Adjustable angle of rotation with mechanical end stops.

High functional reliability

The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.
